

Annex 2 - Quotes from CE IAP Members

Mr. Nicholas Parker said, “As a living experiment in successful urbanization and economic development, Singapore is positioned to lead in the creation and development of cleantech both domestically and internationally.”

Professor Koen Steemers said, “Singapore has made significant steps to being a clean and green city. But it is also a dynamic and exciting city in a tropical climate that relies on energy. With the current Clean Energy initiatives in place, it has the potential to demonstrate what it takes to be a sustainable city.

In order for Singapore to lead the clean technology revolution, it needs to be seen to practice sustainable design in its own backyard.”

Dr. Winfried Hoffmann said, “Based on the exceptional positive results for the feed-in tariff support programmes in most countries in Europe, India and South Korea, this may also be a push in Singapore for boosting PV applications.”
