

# THE WIN-WIN OUTCOMES OF SANOFI'S AND MAGORIUM'S PARTNERSHIP

## For Sanofi

### Embedding green initiatives in biopharmaceutical manufacturing

The partnership contributes to the Modulus facility's focus on sustainable manufacturing and green technology. It also advances Sanofi's sustainability commitments, reducing its environmental footprint across both manufacturing processes and facility construction while maintaining cost and road quality comparable to traditional materials.

### Driving meaningful change in the face of challenges

The collaboration exemplifies how partnerships can be a strategic means to drive meaningful change in industries where decarbonisation may seem complicated or difficult.

## For Magorium

### Levelling up the company's green mission

Working with a global healthcare leader like Sanofi helped advance Magorium's mission and provided a high-profile case study for its technology.

### Expanded capabilities

Prior to this project, Magorium's waste recovery efforts were focused on collecting industrial waste generated by businesses in retail, logistics, and manufacturing. Following its partnership with Sanofi, the company has embarked on recovering used inhalers with other partners.
